Dear [redacted]

Re: Full Disclosure – OUR FILE# [redacted]

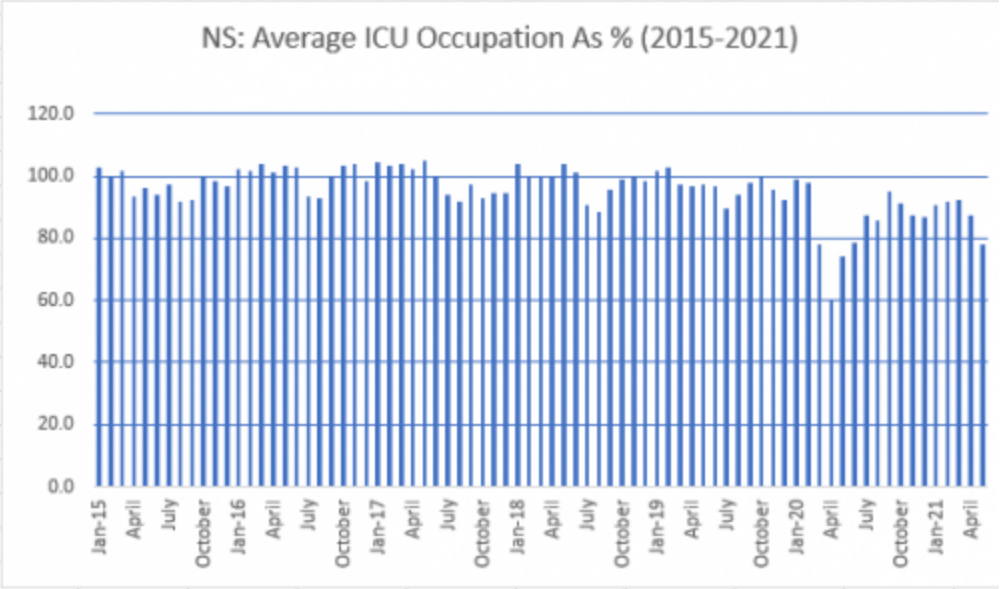
On June 18, 2021 Nova Scotia Health (NSH) received your request under the *Freedom of Information and Protection of Privacy Act* (*FOIPOP Act*).

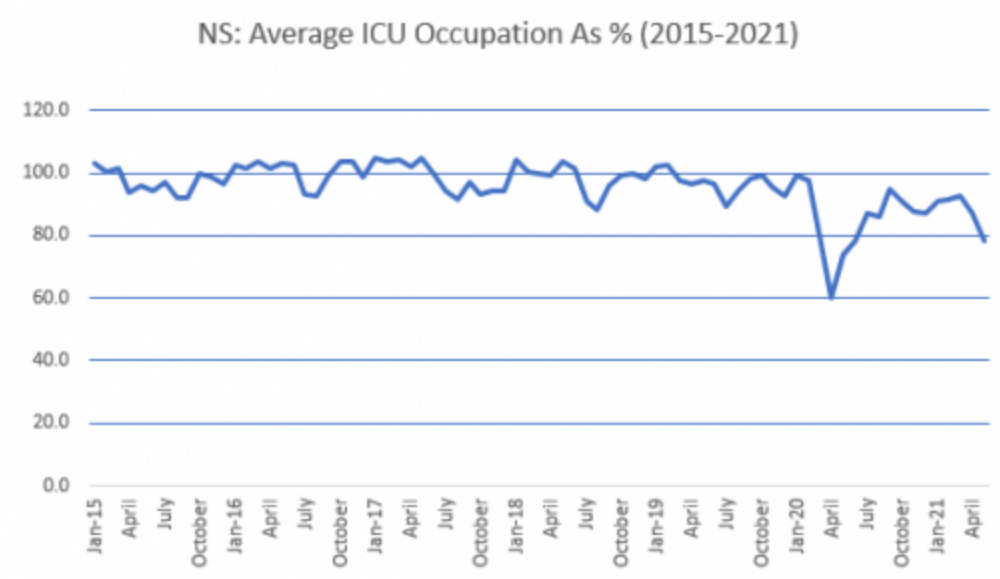
We understand your application to be for a copy of the following:

1. *Please provide the total numbers of all ICU admissions (from all causes) for all of Nova Scotia's Hospitals for the last 5 years (2015-2020 yearly ICU admissions) from January 1, 2015 to December 2020.*
2. *Please provide the total numbers of ICU beds available in each of Nova Scotia's Hospitals from January 1, 2015 to December 2020.*
3. *Please provide a breakdown of ICU beds used from January 1, 2015 to December 2020.*

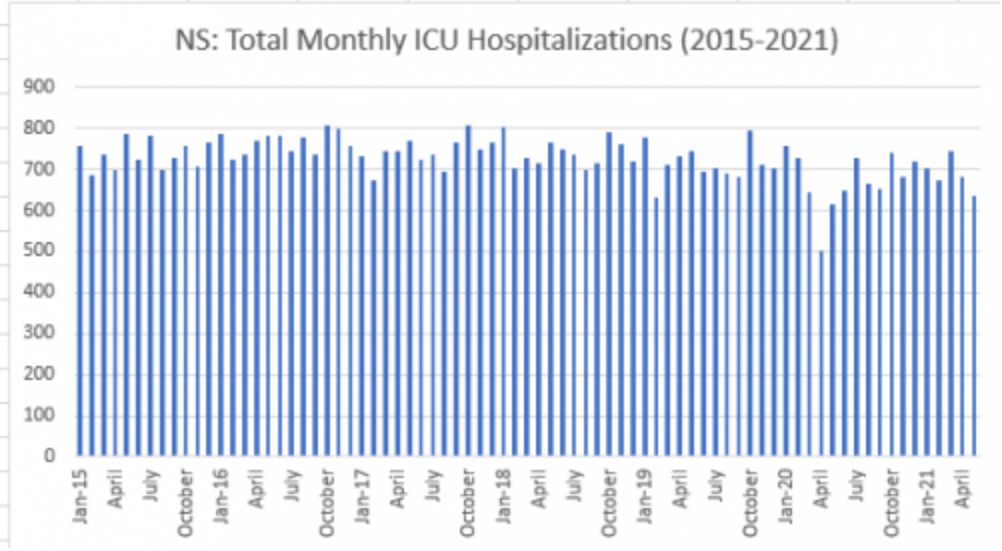
The following information came as a result of a freedom of information request (FOI), that a concerned resident of Nova Scotia obtained. Also, this review from in-fact.ca is worth a look as well.

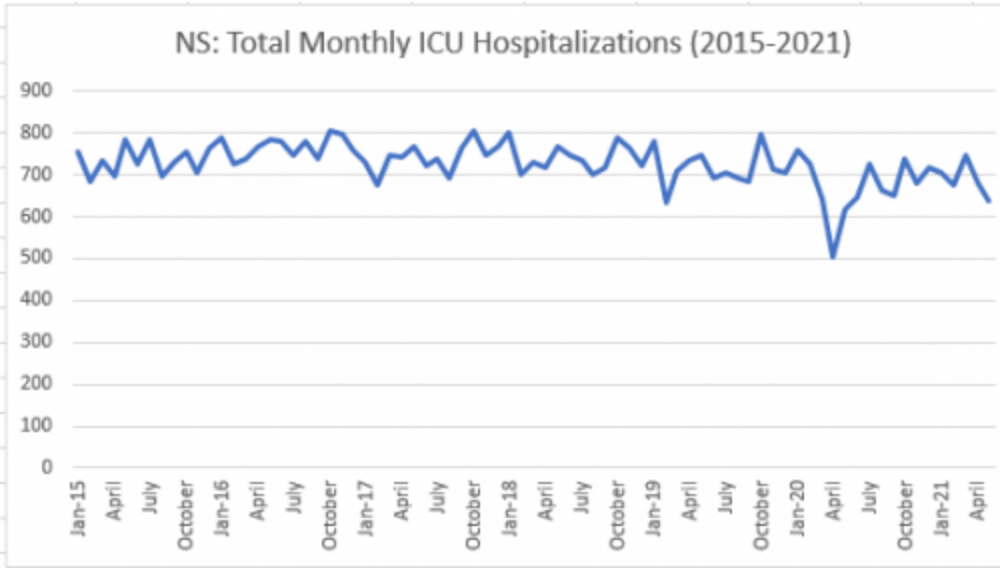
For privacy reasons, personal information has been scrubbed. However, the data obtained (in an Excel spreadsheet), is quite telling. This covers the range from January 2015, up to and including May 2021. There has been no death wave, despite the media hype.



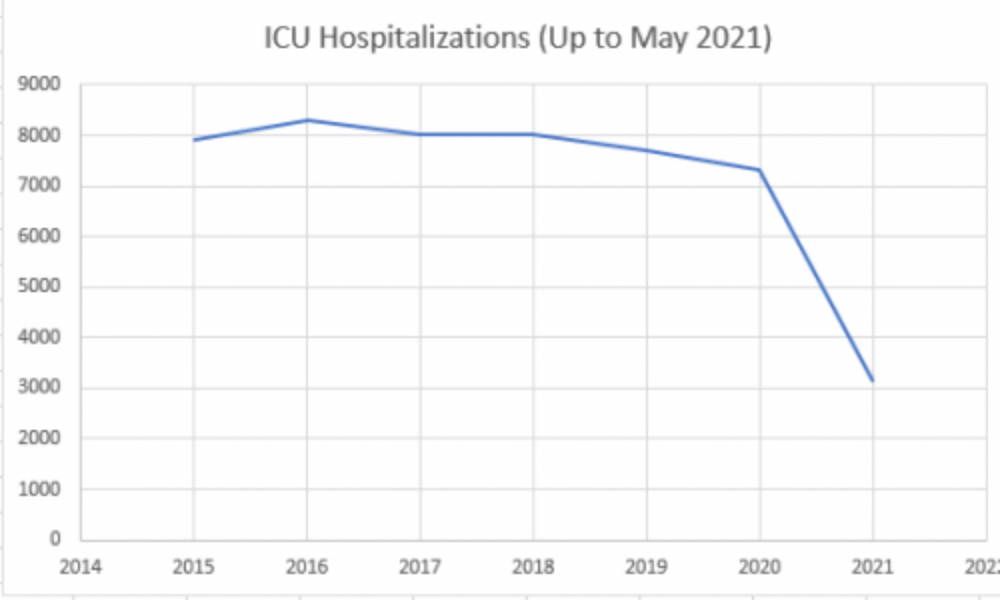


Iain Rankin and Robert Strang are constantly leading the Nova Scotia public to believe that there is some wave of hospitalizations as a result of this so-called “pandemic”. However, going back to 2015, it seems that the ICU (intensive care unit), has always hovered about 100% capacity. If there is some capacity issue, and lack of beds, this is a problem that dates back many years.





The ICU incidents of hospitalization hasn't shot up either. Aside from March/April 2020, when the hospitals were emptied, it has averaged around 700 to 800 per month.



Keep in mind, the data for the FOI only goes are as far as May 2021 (hence the apparent drop). Nonetheless, this doesn't look like some wave that we all need to be scared about. The above tables show combined data from all Nova Scotia hospitals. But even separating the data out, there isn't some big surge anywhere. Even using the Province's own data — assuming it's accurate — there is no cause to be alarmed about this "pandemic".

Do any of these regional data charts show any “waves” of ICU hospitalization in 2020 or 2021? True, this isn’t all of them, but look at the raw data. There’s no surge in any of them.

Note: this isn’t about debating whether this “virus” exists, as there is no proof it does. Instead, this is about showing Nova Scotia’s own reported data. Even taking everything they say at face value, there is no pandemic. There is no wave of hospitals being overrun. Sure, they may be understaffed, but that’s a problem that goes back years.

One really has to wonder why the Province’s “Top Doctor”, who looks like an unhealthy slob, keeps pushing the narrative that there is a health crisis. Makes one ponder the true reason they wanted protests and gathering shut downs.

Thank you to the person who took the time to file this, and then share the FOI data. It’s been informative, although not surprising.

Since we’re on the topic of FOIs, do check out the work by Fluoride Free Peel. This group has been trying to prove (or disprove) the claims this “virus” has ever been isolated. The results are pretty shocking.

This was interesting. Thank you for sending the FOIA to them. Just for the fun of it, I looked up the population of Nova Scotia and in 2021, the population was 940,600. So basically, you can compare these status out of almost 1 million people.
Good job.

There’s a PDF that’s going around with Health Canada stating they do not have proof of the virus’ existence

One thing that is never mentioned about hospital occupation is the FACT that all hospitals are expensive to run and the ONLY way they can continue to run is if they maintain a 90% occupation rate! So when someone sAys there is a problem because hospitals are running at 80-85% occupancy, trying to make you believe they are too full, they are actually telling you they are not full enough!

https://andrewkaufmanmd.com/sovi/ Dr Kaufman and Dr Tom Cowan have done the research and no isolated 🦠 has been identified according to Koch's Postulates

Even some long term homes had empty beds so if hospitals are filled to capacity why not send less sick patients to these empty beds to recuperate.
The virus is manmade and even ones with the vaccine are getting sick. My opinion only

Did you see this? Dr. Robert Strang introduces revisions to Health Protection Act that would allow the government of NS to detain individuals and force them to comply with vaccine law. See

section 45, 46, and 49 of the revised law.
